SUMMARY

React Native Developer with 4 years of professional experience — 3+ years building and shipping production-ready, cross-platform mobile applications, following an initial 10 months in QA automation. Independently developed and published an end-to-end CRM + FEMS (Factory Efficiency Management System) product on the Google Play Store.

Delivered high-impact features such as an AI-powered visiting card scanner for automated customer data capture, real-time FCM push notifications across CRM and TMS platforms, and a live GPS-based school bus tracking system used by parents and drivers.

Started in QA automation before transitioning into full-time development, bringing a strong eye for detail and product quality. Actively expanding into full-stack web development and AI-assisted coding workflows to build robust mobile + web solutions end-to-end.

Seeking remote/hybrid React Native opportunities at product-first companies to grow as a builder and contribute to meaningful, high-quality mobile products.

EXPERIENCE

React Native Developer

Techgenzi Private Limited

May 2023 – Present

Coimbatore, India

- Developed and shipped production-level, cross-platform mobile apps (React Native CLI + TypeScript) across CRM, TMS, CMS, and FEMS projects — including an **end-to-end CRM + FEMS product independently built and published live on the Google Play Store**.
- Built **FEMS (Factory Efficiency Management System)** for factory/industry operations, covering **Inventory, Stock Updates, Sales, and Delivery Management** modules end-to-end.
- Engineered an **AI-powered visiting card scanner** that captures a business card image, extracts customer details via AI/OCR, and auto-populates the backend database — eliminating manual data entry.
- Built a **mobile GPS-based school transport tracking system**: created and assigned bus routes to drivers, then tracked live location via the driver's mobile GPS so parents could monitor their child's bus in real time.
- Successfully integrated **FCM push notifications** end-to-end across CRM and TMS apps, plus Firebase Authentication, Firestore, and Google Maps API — powering real-time chat, alerts, and location-based features.
- Implemented **React Navigation** (multi-screen routing + param passing) and **Redux Toolkit** (local/user data persistence), including a custom-built configurable tab bar for the CRM app; consumed REST APIs via Axios and built a **custom native Android module** for call-log access.
- Built an **in-house analytics/usage-tracking system** for Techgenzi's mobile and web apps: developed an **SDK issuing a unique per-app token** that auto-captures user actions and queues them client-side before posting to the API — ensuring zero data loss even under network interruptions.
- Built the **React.js + Flask** backend/dashboard layer on top of that tracking data, powering multiple dashboards that show which features customers use most; used AI-assisted coding tools to accelerate development. Manually built and released app versions to the Google Play Store, collaborating closely with backend and UI/UX teams in Agile sprints.

Software Tester (QA Automation)

Techgenzi Private Limited

July 2022 – May 2023

Coimbatore, India

- Automated regression and performance testing using Selenium (Python) with Pytest, and used JMeter for load testing production APIs — reducing manual testing time by 50%.
- Reported and tracked bugs, coordinating fixes with developers to improve release quality.
- Promoted internally to the development team based on consistent performance and initiative.

SKILLS & EXPERIENCE FOCUS

React Native / Mobile Development

70%

Core focus area — production mobile apps with real-time features, native integrations, and Play Store releases.

React Native, React Navigation, Redux Toolkit, TypeScript, Firebase (Auth, Firestore, FCM), Google Maps API, REST APIs & Axios, Native Modules (Android), AsyncStorage, Play Store Deployment, Jest

Frontend Web Development

20%

Growing full-stack capability, building responsive web UIs alongside mobile work.

React.js, JavaScript (ES6+), HTML5, CSS3, Responsive/Component-based UI, REST API Integration, Framer Motion

Backend Development (AI-Assisted)

5%

Backend work for full-stack projects, built using AI-assisted coding tools to accelerate delivery.

Node.js, Express.js, MongoDB, Flask, Python, REST API Design, GitHub Copilot, Cursor AI, ChatGPT, Gemini, Cline AI

QA Automation & Testing

5%

Foundational skill from early career — automated testing and load testing.

Selenium, Pytest, JMeter, Unittest

EDUCATION

Bachelor of Engineering — Electrical and Electronics Engineering

Aug 2018 – Jun 2022

Mohamed Sathak Engineering College

GPA: 8.65 · First Class

- Graduated with First Class and a strong foundation in systems and programming concepts.

AWARDS

Internal Promotion – Developer Track

May 2023

Techgenzi Pvt. Ltd

- Promoted from QA to Developer role based on consistent delivery, upskilling, and internal recognition; transitioned into full-time React Native development after independently building internal tools and showing initiative.

Best Employee of the Month – Mobile App Developer

December 2024

Techgenzi Pvt. Ltd

- Recognized as top-performing developer for outstanding delivery and ownership across CRM, CMS, and FEMS mobile apps, including real-time chat, push notifications, and location-aware workflows.

INTERESTS

Building Minimalist Mobile UIs

UI/UX, React Native, Framer Motion, Design Thinking, Microinteractions, Accessibility

Exploring New Dev Tools & Open Source

GitHub Projects, VSCode Extensions, Postman, Workflow Optimization, Reading Code, Open Source Culture

AI Development Tools

GitHub Copilot, Cursor AI, ChatGPT, Gemini, Cline AI

LANGUAGES

Tamil — Native fluency in both casual and formal settings.

English — Comfortable with written communication and technical comprehension; actively improving spoken communication through daily collaboration.
